# ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

*Cortellis* Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

**Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence***

## GLOSSARY

### Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

### Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

### Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

### Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

### Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

### Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

### Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

### Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

### Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

<b>Key Technologies</b>	Small molecule therapeutic,Intravenous formulation,Oral formulation,Biological therapeutic,Infusion,Nasal systemic formulation,Peptidomimetic

## COMPANY PROFILE

### SUMMARY

GlycoMimetics Inc (GMI) is active in the field of glycobiology and develops small-molecule drugs that mimic the functions of certain carbohydrates. The company's initial focus is on therapeutics to treat inflammatory diseases and cancer.

### ACQUISITIONS AND SPIN-OFFS

By early 2003, GMI had acquired the assets of GlycoTech Corp, including exclusive rights to 15 issued US patents and numerous small molecules that could have therapeutic potential.

### COMPANY LOCATION

In August 2014, the company's headquarters was shifted to Medical Center Drive in Rockville, Maryland.

### FINANCIAL

In October 2013, GlycoMimetics filed a registration statement on Form S-1 with the US SEC for a proposed initial public offering of shares of its common stock. By that time, the company had applied to list its common stock on the NASDAQ Global Market under the ticker symbol 'GLYC'. In January 2014, the company priced the offering of 7,000,000 common stock shares at \$8.00 per share and granted a 30-day option to the underwriters to purchase up to an additional 1,050,000 common stock shares. At that time, the offering was expected to close on January 15, 2014; later that month, the offering of 8,050,000 shares was closed. The company raised net proceeds of approximately \$57.4 million.

In October 2009, GlycoMimetics raised \$38 million from a venture financing round.

In June 2006, GlycoMimetics raised an additional \$15.4 million from its series B financing. It planned to use the funds for preclinical development of its selectin inhibitors for inflammation and its lectin-binding glycomimetics for infection.

In August 2004, GlycoMimetics raised an additional \$5.1 million from an extension to a series A seed financing, bringing total proceeds to \$9.6 million. The funds would be used to advance the company's research programs.

[Return to Table of Contents](#)

In May 2003, GMI closed on its initial seed round of venture financing.

<b>Last Change Date</b>	30-Oct-2014

#### rivipansel sodium DEVELOPMENT PROFILE

##### SUMMARY

GlycoMimetics and licensee Pfizer are developing rivipansel sodium (GMI-1070, PF-06460031, structure shown), the lead from a series of heterobifunctional glycomimetic pan-selectin inhibitors, for the potential iv treatment of vaso-occlusive crisis associated with sickle cell disease.

In May 2010, a phase II trial for vaso-occlusive crisis of sickle cell disease began; in April 2013, positive topline data were reported. In July 2014, Pfizer had reached an agreement with the US FDA under a special protocol assessment (SPA) for a phase III trial for vaso-occlusive crisis of sickle cell disease ; in August 2014, the phase III trial was to start in September 2014. In September 2014, the trial initiation was delayed due to the manufacturing development issue as notified by the Pfizer and the company would provide a timeframe regarding the initiation of the trial to GlycoMimetics.

GlycoMimetics was previously developing the drug for other indications. In October 2009, the drug was listed as in phase I development for hematological cancers by GlycoMimetics ; this was still the case in February 2012. However, no further development for this indication has since been reported. GlycoMimetics was initially also investigating rivipansel sodium for the potential treatment of asthma; however, no development has been reported in asthma.

rivipansel sodium SALES AND FORECASTS

CHARTS

## COMMENTARY

### CONSENSUS SALES INFORMATION

Consensus forecast data for Pfizer are presented.

### REGIONAL DEVELOPMENT AND MARKETING RIGHTS

In October 2011, Pfizer acquired an exclusive worldwide license from GlycoMimetics for rivipansel sodium for vaso-occlusive crisis associated with sickle cell disease and other indications. Under the terms of the agreement, GlycoMimetics would remain responsible for completion of the ongoing phase II trial under Pfizer's oversight, and Pfizer would then assume all further development and commercialization responsibilities [1229751].

## GMI-1271

### GMI-1271 SNAPSHOT

Drug Name	GMI-1271
Key Synonyms	
Originator Company	GlycoMimetics Inc
Active Companies	GlycoMimetics Inc
Inactive Companies	
Highest Status	Phase 1 Clinical
Active Indications	Deep vein thrombosis;Metastasis;Acute myelogenous leukemia;Pancreas tumor;Thromboembolism
Target-based Actions	E-Selectin antagonist
Other Actions	Anticancer;Anti-inflammatory
Technologies	Oral formulation;Intravenous formulation;Small molecule therapeutic
Last Change Date	18-Nov-2014

### GMI-1271 DEVELOPMENT PROFILE

#### SUMMARY

GlycoMimetics is developing GMI-1271, an E-selectin antagonist with a companion diagnostic, for the potential treatment of cancers that are associated with elevated risk of metastasis and thrombosis including pancreatic cancer and acute myelogenous leukemia (AML) and other blood disorders,,. In June 2014, a phase I trial for AML was initiated ; in November 2014, topline results were reported. At that time, the company expected to initiate a phase I/II trial in AML in the first quarter of 2015. In December 2013, a phase I trial for deep vein thrombosis (DVT) was planned in mid-2014. In October 2014, the company was seeking to out license the drug.

The company was previously investigating small molecule glycomimetic E-selectin antagonists, for the potential oral treatment of diabetes related vascular inflammation. In May 2009, the program was in lead optimization stage ; however, in December 2011, no further development was reported.

Technologies	Nasal systemic formulation;Small molecule therapeutic
Last Change Date	12-Nov-2014

### GMI-1051 DEVELOPMENT PROFILE

#### SUMMARY

GlycoMimetics is investigating GMI-1051, a small molecule PA-I galactophilic lectin (PA-IL) and fucose-binding lectin (PA-IIL) binding agent, from a series of nasally administered, lectin virulence factor-binding compounds, for the potential treatment or prevention of infections caused by *Pseudomonas aeruginosa* in cystic fibrosis (CF) patients,. In May 2009, preclinical studies had begun . At that time, the company anticipated obtaining additional efficacy data and the initiation of clinical trials. In October 2009, the company was planning to develop GMI-1051 as an antibiotic adjunctive therapy . In February 2012, GMI-1051 was listed as being in preclinical development ; in January 2014, this was still the case. In June 2011, the company was seeking to outlicense the drug.

<b>Technologies</b>	Small molecule therapeutic
<b>Last Change Date</b>	22-Jan-2014

### dual E-selectin and CXCR4 inhibitors (hematological cancer/inflammation), GlycoMimetics DEVELOPMENT PROFILE

#### SUMMARY

GlycoMimetics is investigating a program of compounds, including GMI-1215 and GMI-1257, which inhibit the overlapping E-selectin and CXCR4 pathways, for the potential use as a chemosensitizer in the treatment of hematological cancers including acute myeloid leukemia and for the potential treatment of inflammatory diseases,. In December 2011, preclinical data were reported ; in January 2014, the program was still listed as being in preclinical development.
