ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

DISCLAIMER

The information contained in this report is based on sources believed to be correct but Thomson Reuters does not guarantee the accuracy, timeliness, or completeness of this information. GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs	12
Number of Patents as Owner	19
Number of Patents as Third Party	2
Number of Deals	9
Key Indications	Breast tumor,Chordoma,HIV infection,Hepatitis D virus infection,Non-small-cell lung cancer,Pancreas tumor,Colorectal tumor,Medullary thyroid cancer,Mycobacterium tuberculosis infection,Hepatitis B virus infection
Key Target-based Actions	Mucin 1 stimulator,CD66e modulator,Hepatitis C virus NS3 protease modulator,Brachyury protein modulator,CD95 agonist,Epidermal growth factor receptor modulator,HIV GAG protein modulator,PARP inhibitor,Protease inhibitor,Ras GTPase modulator,SETX gene modulator
Key Technologies	Yeast recombinant,Biological therapeutic,Antigen presentation system,Parenteral formulation unspecified,Tumor antigen therapeutic,Subcutaneous formulation,Small molecule therapeutic,Viral core protein,Protein fusion,Drug combination,Peptide

COMPANY PROFILE

SUMMARY

GlobelImmune Inc is a biopharmaceutical company which is engaged in the discovery, development and manufacturing of potent, targeted molecular immunotherapies, named Tarmogens, for the treatment of cancer and infectious diseases. Tarmogens are whole, heat-killed recombinant *Saccharomyces cerevisiae* yeast which has been genetically modified to express protein targets. They taken up by antigen presenting cells, and stimulate a cytotoxic T lymphocytes against cells expressing the desired target.

COMPANY LOCATION

In December 2005, GlobelImmune relocated its headquarters to Louisville, CO.

TECHNOLOGY INFORMATION

Tarmogens are whole, heat-killed, recombinant *Saccharomyces cerevisiae* engineered to produce one or more target disease proteins or antigens that stimulate the immune system against diseased cells.

LICENSING AGREEMENTS

In May 2009, GlobelImmune granted exclusive license to all their oncology programs, including GI-4000 immunotherapies, to Celgene, for which GlobelImmune will receive a \$40 million upfront payment from Celgene. GlobelImmune will conduct the early development of the product candidates through certain pre-defined endpoints. Celgene will have the option to obtain an exclusive worldwide license to develop and commercialize these immunotherapy product candidates. GlobelImmune is eligible to receive over \$500 million in development and regulatory milestones, double-digit royalties and additional milestone payments based on net sales of the licensed product candidates.

In July 2008, GlobelImmune and the National Cancer Institute (NCI) at the National Institutes of Health (NIH) signed a CRADA to jointly develop Tarmogen based immunotherapy products for cancer. GlobelImmune would use its Tarmogen technology to develop the products which would express cancer antigens provided by the NIH. The NIH would conduct and fund preclinical and early clinical development of the product candidates. CEA (carcinoembryonic antigen) was the

[Return to Table of Contents](#)

first cancer antigen to be evaluated in this collaboration.

In January 2005, GlobelImmune and MycoLogics Inc signed a non-exclusive research license and option agreement. MycoLogics was to undertake proof-of-concept preclinical tests of vaccines targeting aspergillosis, coccidioidmycosis, cryptococcosis leishmaniasis, discovered using GlobelImmune's Tarmogen technology. The research was supported by NIH SBIR and STTR awards.

FINANCIAL

In July 2014, the company planned to conduct an IPO of 1.5 million shares priced at \$10 each for gross proceeds of \$15 million. Underwriters would be granted a 45-day overallotment option to purchase up to 225,000 additional shares. The stock was approved to be listed on the NASDAQ Capital Market and trading of shares began under the ticker symbol 'GBIM'. At that time, the offering was expected to close on July 08, 2014. Later that month, the company raised gross proceeds of \$17.25 million from the offering of 1.725 million shares.

In July 2012, the company filed a common stock IPO registration statement with the US Security and Exchange Commission. At that time, the company also filed for its common stock to be listed on the NASDAQ Global Market under the symbol "GBIM".

In January 2010, GlobelImmune raised \$17.5 million from a series E preferred stock financing round.

In September 2007, GlobelImmune closed a \$41.2 million series C preferred stock financing round.

In January 2006, GlobelImmune completed a second closing of its series B preferred stock financing, raising a further \$4.1 million in addition to the previous \$34.3 million. The Company would use the funds to finish a phase II trial of GI-4000 for pancreatic cancer, and a phase Ib trial of GI-5005 for chronic hepatitis C infection.

In June 2003, GlobelImmune closed a series A preferred venture financing round. The round provided for up to \$8 million in two tranches, with closure of the second tranche dependent on achievement of certain milestones.

GI-19000

GI-19000 SNAPSHOT

Drug Name	GI-19000
Key Synonyms	
Originator Company	GlobelImmune Inc
Active Companies	GlobelImmune Inc;Colorado State University
Inactive Companies	
Highest Status	Discovery
Active Indications	Mycobacterium tuberculosis infection
Target-based Actions	
Other Actions	Unspecified drug target;Antibacterial;Therapeutic vaccine;Prophylactic vaccine
Technologies	Antigen presentation system;Yeast recombinant;Biological therapeutic;Parenteral formulation unspecified
Last Change Date	29-Jan-2014

GI-19000 DEVELOPMENT PROFILE

SUMMARY

GlobelImmune and the Colorado State University are investigating GI-19000, a recombinant yeast based vaccine, based on GlobelImmune's Tarmogen platform, for the potential prevention and treatment of Mycobacterium tuberculosis infection,. In June 2013, the drug was listed as being in preclinical development.
