PAHC-BUY-Raising PT From \$21 to \$24 Post Strong F4Q14 Animal Health Results and Better-than-expected Guidance for '15

September 17, 2014

- We use a blend of P/E, DCF & Sum of the Parts analysis to arrive at our new 12-month PT. The increase in our PT is a result of multiple expansion because PAHC's execution continues to exceed our expectations. F4Q14 results and PAHC's '15 outlook increase our confidence that the sustainability of PAHC's earnings growth is underappreciated. Although PAHC missed F4Q14 expectations, Animal Health sales were robust and above the industry average (13% for PAHC vs. 6% for the industry).
- Our investment thesis is:** 1) Global trends over the next several decades support the need for PAHC's products; 2) PAHC is a leader in high growth sectors of Animal Health; 3) The Animal Health industry has better dynamics than Human Health; 4) Margin expansion will drive EPS growth.
- F4Q14 positives:** 1) Animal Health sales increased 13%. Driven by volume growth across all products, future price increases could drive upside; 2) MFA increased 12%, driven by growth in Brazil, Lat Am & APAC; 3) Nutritionals grew 17%, due to U.S. growth of dairy products & introduction in select EU countries; 4) Vaccines grew 21%, from the introduction of new products.
- PAHC reported F4Q14 EPS of \$0.22, \$0.05 lower than consensus and \$0.12 lower than us. Our variance analysis has details. PAHC presented its F'15 guidance of adjusted diluted EPS of \$1.46-\$1.51 (+20%-24% YOY). This compares favorably to consensus expectations of \$1.46 (we estimated \$1.52). We lowered our F15 EPS and this was driven by higher interest expense and taxes than we had previously forecasted.
- Potential Catalysts.** 1) Increasing share & geographic expansion of existing products, '14+; 2) New product approvals & launches, '14+; 3) Gross margin & operating margin expansion, '14+; 4) Debt paydown reduces interest expense, '14+; 5) Tuck-in acquisitions, '14+

VALUATION METHODOLOGY AND RISKS

We use a DCF analysis to get to our 12-month price target of \$24. We use a WACC of 12% and an exit multiple of 10x forward EBIT to arrive at our price target. This compares favorably to other Animal Health companies, which trade on average at a forward EV/EBIT of 16x. This compares favorably to similar companies that have been acquired at a historical EV/EBITDA of 11x, which means the EV/EBIT would likely be even higher. Risks to our valuation include: 1) regulatory restrictions on the use of antibacterials in food-producing animals; 2) increased competition from larger and better capitalized companies in the industry; 3) adverse weather conditions and the availability of natural resources; 4) lack of new product launches and/or existing products fail to gain market share.
